

Schonstedt locators

Schonstedt offers a broad range of magnetic metal locators to find and trace deep buried pipes, joints or valves carrying gas, water, oil, or waste products.

Using innovative HeliFlux sensor technology, Schonstedt locators can detect the magnetic fields that are present on any buried ferrous and steel objects or man-made magnets and markers.

What are ferrous metals?

These are metals which contain iron. They may have small amounts of other metals or other elements added, to give the required properties.

Alloys of iron and steel are the most common of all commercial metals. These include wrought iron, cast iron, carbon steels, alloy steels and tool steels.

Designed and developed for the following industry sectors:

- Gas and Oil
- Water and Sewer
- Construction and Excavation
- Roads and Transportation
- Survey and Mapping
- Contract Locating
- Demolition and Demining

Schonstedt locators are designed for the accurate and reliable location of buried ferrous metal objects, such as:

- Water and gas pipes, joints and welds
- Rebar
- Water box covers and meters
- Reinforced septic or petrol storage tanks
- Buried/lost storage drums
- Culverts
- Well casing
- Ferrous waste
- Man-made magnetic markers
- Ordnance and weaponry
